EXPERIENCE

cloudflare

may 2024 – present

security operations, trust and safety

senior software engineer

- **forward-deployed:** embedded across security and trust teams to diagnose broken operational processes and build full-stack solutions
- **0-to-1 build:** architect and ship the operational platform behind cloudflare's soc-as-a-service, replacing manual tasks
- **product ownership:** define product roadmaps, scope requirements, and own cross-functional delivery dates
- **mentorship:** mentor junior engineers and interns to ramp up code quality and increase overall team shipping speed
- **ai workflows:** train non-technical enterprise stakeholders on leveraging AI tools to accelerate research and documentation

software engineer

- **operational impact:** reduced legal response processing times by 80–90% and completely eliminated engineering overhead for routine requests
- **self-serve uis:** built a metadata-driven UI framework that allows Trust & Safety analysts to self-serve, defining their own templates and workflows without code changes
- **product ownership:** served as primary frontend owner for all Legal Response UIs, building internal applications for geoblocks, PRTT processing, and data preservation from scratch

season

jul 2022 – nov 2023

healthtech, nutrition, series a

frontend engineer

- **greenfield delivery:** engineered and shipped critical patient-facing infrastructure, including the cart checkout flow, intake forms, and third-party vendor storefront
- **design system:** created an internal design system with reusable components, drastically accelerating team development velocity and reducing visual debt
- **on-call responsibility:** triaged and resolved high-priority production bugs during on-call rotations to maintain platform uptime

ellevest

sep 2019 – jun 2022

fintech, series b

software engineer ii

- **onboarding and conversion:** developed core full-stack features using React and React Native, driving a 4% increase in conversion and a 20% increase in funding rate
- **production support:** debugged and resolved complex application issues escalated through client support and automated bug reports
- **test automation:** authored comprehensive end-to-end mobile and web automation test suites using webdriverio to guarantee release stability
